

## STRATAGLASS PRESSED POLISHED CLEAR PVC

**Scratch Resistant Coating:** Prevents fine line scratches from washing, drying, rolling up and down and abrasion from roll-up straps. Regular vinyl can be scratched by a simple paper towel.

**Clarity:** We have made our name on the near-perfect visual clarity looking through Strataglass. Regular vinyls have blue or grey haziness to them which is instantly visible when comparing Strataglass to the regular vinyls being offered on the market.

**Resistance to fallout, runoff and overspray:** You may have noticed grey streaks in your vinyl curtains in the past, consistent with the brass grommets on your Bimini top or runoff points of your top. The coating on Strataglass blocks these elements from etching into the surface of the vinyl. This is true of most trace elements, even overspray can be carefully cleaned off using lacquer thinner (see Trouble Shooting section for more information). Regular vinyls absorb runoff elements and would be destroyed using lacquer thinner to remove overspray.

**Longevity:** Because you will see clearer, longer, you will find you don't need to replace the curtains as often. The question often asked is "How long will Strataglass last?" Our only answer is that the two original boats installed with Strataglass still looked great after six years in the brutal Florida sun.

**SHEET SIZE**  
282cm x 137cm

**THICKNESSES**  
CLEAR            0.75mm  
CLEAR            1.00mm  
TINTED           1.00mm
